Group

**BUSINESS UNIT PLASTIC**

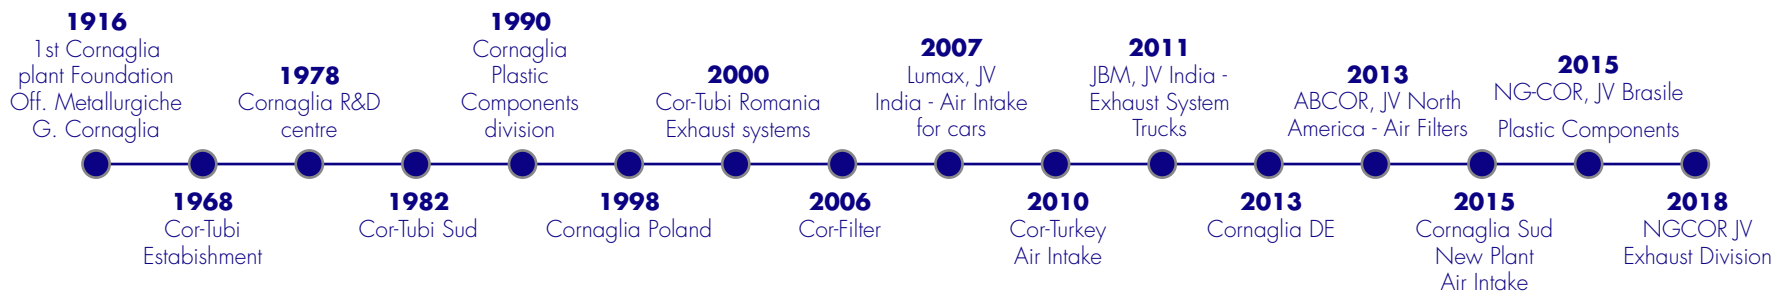

YEARS OF COMMITMENT

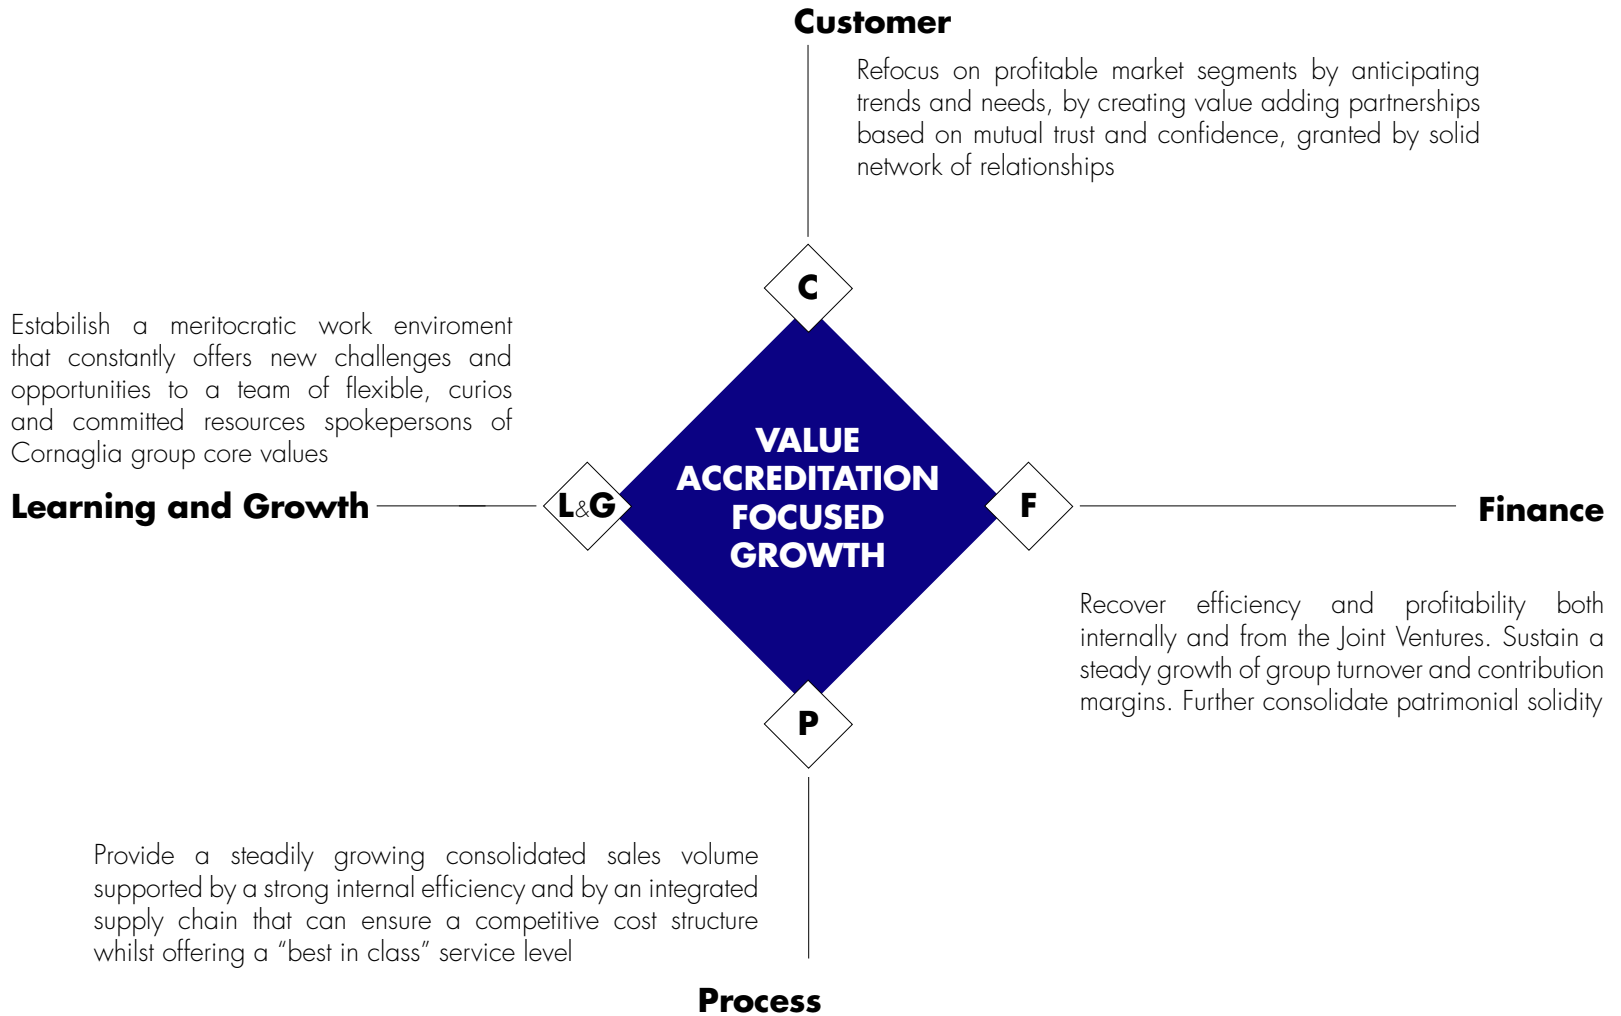

*PASSION, DETERMINATION, INNOVATION FROM ITALY TO THE WORLD*

Cornaglia is a **Multinational Group** partner for the automotive sector thus **constantly evolving**, capable, by leveraging on **entrepreneurial courage**, to **anticipate** the needs of the markets it competes on.

Able to offer forefront **technical and engineering solutions** highly valuable to our customers, achieved by integrating and coordinating its processes and leveraging on its **continuous improvement approach**.

**Milestones**

# **BUSINESS UNIT**

---

**PLASTIC DIVISION**

R&D CENTRE

The **PLASTIC Business Unit (BU)** has the main technologies for the manufacturing/production of thermoplastic materials. Thanks to the available press fleet, this BU is able to produce medium and large components, using all the polymers (from polyethylene to polypropylene up to technopolymers, such as polyamide and polycarbonate).

## Technologies

- ROTATIONAL MOULDING
- INJECTION MOULDING
- 3D BLOW
- TRADITIONAL 2D

Cornaglia Group has 50 injection moulding machines installed in his facilities.  
They are from 100 to 2.300 tons

**Materials:**

- PP
- ABS
- PC
- PA
- PE

**AIR INTAKE SYSTEM**

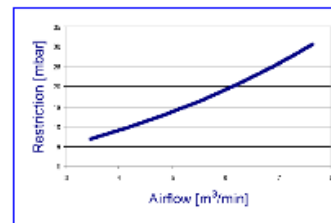

# AIRBOX + FILTER ELEMENT FOR OFF-ROAD

CF 001 series

SIZE	TYPE	L	H	W	Φ out	Φ d	WEIGHT
8"	Compact - V	370 mm	265 mm	188 mm	89 mm	56 mm	2,5 Kg

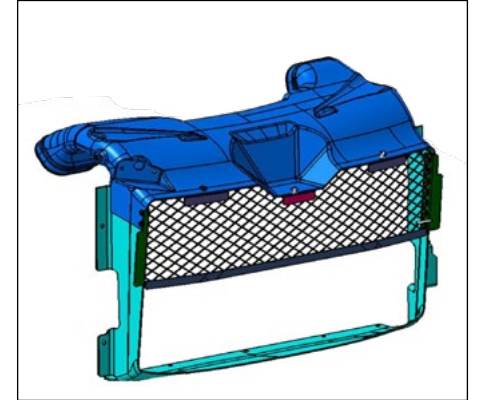

Performance 8" Cor - Flow

Test are performed in accordance with ISO 5011 procedures.

UREA TANK

Cornaglia Group owns 15 3D blow moulding machines and produces in mono and bi-materials (soft + rigid)

### Materials:

- PP+EPDM
- PP GLASS FIBER
- POLYESTERE
- NYLON

## AIR DUCTS

Cornaglia Group owns 4 blow moulding 2D machines installed in his facilities

COMPONENTS AIS

Cornaglia Group owns 12 Roto-moulding machines (11 traditional + 1 Leonardo). This technology is supported by robotized system for cutting operations and they are available in every facilities

## ROOF

## CABIN COMPONENTS

TANK

UREA TANK

Cornaglia supply the UREA tanks assembled with sender, filler, cap and brackets

**BUSINESS UNIT**

---

PLASTIC DIVISION  
**R&D CENTRE**

The **RESEARCH & DEVELOPMENT CENTRE**, recognized by the Ministry of Education, University and Research is a modern structure that extends over an area of 5,000 square meters in Brassicarda, near Villanova d'Asti. About 50 highly specialized people work there, employed in research and development, prototyping and experimental verification.

## Project management

Cornaglia's product development process is ISO-TS certified and includes:

- *analysis of customer needs*
- *system design and preliminary verification with the aid of CAE (Computer-Aided Engineering) tools*
- *in-House prototypes manufacturing*
- *system validation through engine and laboratory testing*

The entire process is managed by APQP tool to assure it meets the requirements of demanding automotive customers.

## Engineering

Cornaglia designs and develops complete systems and components for passenger cars, light commercial vehicle, medium and heavy duty trucks, buses as well as agriculture and construction machinery.

The following CAD systems are used:

- CATIA V5 R24
- NX 9,03

Design for manufacturing is assured by simultaneous engineering of production processes.

## Hybrid cars: study of refrigeration of battery pack containers

On Hybrid cars the batteries must be used in a certain temperature range.

The innovation center is developing new alternatives to the currently used cooling systems

### Current systems

- System n 1: Air is drawn in from the vehicle's airconditioned cabin and used to cool the battery.
- System n 2: A special evaporator plate, included in the battery cell, is connected to the vehicle's air conditioning system.
- System n 3: A cooling plate mounted in the battery pack is traversed by the cooling liquid consisting of water and glycol (green circuit).

System n 1: Air

System n 2: Evaporator plate

System n 3: Cooling plate

## Prototypes

Cornaglia's prototype shop is located inside our R&D Centre and is equipped with all the basic tooling and machines that are needed to support first protos manufacturing.

A metrological room is used to check parts are dimensionally conform to the drawing before shipping.

## Virtual simulation

Cornaglia's product development process is highly accelerated by using Computer-Aided Engineering tools in the early development phase.

Many different layouts and designs can be evaluated in the concept phase and checked by means of simulation, even before the first prototype is built.

The following state-of-the art simulation codes are used:

- Gamma Technologies gt-potenza
- ANSYS Fluent
- CD-adapco StarCD
- MSC Nastran
- Abaqus

## 3D Printer

### Stratasys Fortus 900M

#### Technology

FDM (overlapping layers from bottom to top by heating and extruding the thermoplastic filament)

#### Tank dimensions

914.4 x 609.6 x 914.4 mm

#### Materials employable

- ASA (simile ABS)
- Nylon 12
- Policarbonato
- ULTEM1010
- ULTEM9085

Example of prototype made of Polycarbonate (Air filter body for off-road application)

Cornaglia R&D Centre is equipped with a complete set of testing rooms, benches and instruments to fully support prototypes physical validation:

### Testing

- flow test benches
- engine test benches
- emissions analyzers
- semi-anechoic chamber with roller bench
- acoustic chamber
- electrodynamic shaker
- fatigue bench
- climatic chambers
- salt spray cell
- pressure test bench
- tanks test bench
- oven chamber
- leakage test unit
- high temperature oven
- dynamometer

## Innovation

Cornaglia heavily invests on innovation as a vital part of the advanced process development, to assure our solutions meet and anticipate customers needs. Examples of Cornaglia's innovations are:

- static urea mixer for exhaust aftertreatment SCR system
- urea sender unit with integrated quality sensor

## Partnership

Cornaglia cooperates with the main Italian and European technical universities and research institutes. Consolidated partnerships with selected suppliers allows us to access the latest product innovation and solutions even before they reach the market.

POLITECNICO  
DI TORINO

UNIVERSITÀ  
DEGLI STUDI  
DI PERUGIA

## Partnership with the Politecnico of Turin

The current framework agreement, signed on 27 February 2013, is divided into:

- Thesis support, internships / internships and doctorates also targeted for recruitment: since 2013 8 engineers have been hired at the R&D staff
- Partnership contracts for research projects
- Participation of Cornaglia as Industrial Partner of the Politecnico to calls for funded research projects
- Cornaglia is present with its own Office within the Politecnico Campus

### Filtri ai carboni attivi

I filtri abbinati combinati con carboni attivi hanno le stesse caratteristiche e funzionalità dei filtri particolari ma in più sono dotati di uno strato di carboni attivi in grado di ridurre cattivi odori e gas pericolosi per la salute del conducente e dei passeggeri.

### Riduzione della CO<sub>2</sub> a gas di sintesi (CO<sub>2</sub>Syngas)

The CORNAGLIA company, with over 100 years of history, has always been committed to reducing the environmental impacts associated with its activities and the risks to the health and safety of its workers.

### Environmental and safety performance

- Installation of a photovoltaic system on the roofs of the plants
- Replacement in all Group plants of old burners with “LOW NOX” heat generators with high efficiency and low emissions of Nitrogen Oxides
- Treatment of industrial waste water with water purification plant
- Replacing the old lighting system with LED lighting to reduce consumption and improve visibility in the departments
